Employment History

DevOps Engineer II at Rightsline

Aug 2024 — Present

- Design and maintain modular Terraform modules and CI/CD pipelines to standardize and automate deployments across Alliant and Rightsline applications.
- Automate AWS Security Hub remediation workflows and deployed Alert Logic to improve security visibility and reduce manual remediation effort.
- Develop Python, Power Shell, and AWS Lambda solutions and containerized tasks to automate recurring cloud operations and reduce manual intervention.

Junior DevOps Engineer at Rightsline

Mar 2023 — Aug 2024

- Built modular Terraform configurations and AWS automation to streamline application management and onboarding.
- Automated Security Hub findings remediation and integrated Alert Logic to strengthen security monitoring and reduce manual triage.
- Authored Power Shell and Python scripts to automate AWS operations and support containerized CI/CD workflows.

Senior IT Engineer at ReliaQuest

Apr 2021 — Mar 2023

- Provided hardware and software troubleshooting both remotely and on-site; provisioned and managed virtual machines using VM Ware.
- Automated employee onboarding and internal process updates using Python and Power Automate, reducing manual steps and errors.
- Administered Active Directory and JAMF for 1,000+ users and performed recurring compliance audits using Power Shell to maintain security posture.
